I'm just wondering when you are going to put an end to allowing the over use of antibiotics in animal feed to promote growth and for medicinal purposes. The only thing that I see that is being accomplished is that someone is getting rich and the rest of the world is getting sick more often because of the super strong bacteria we are creating. I can't tell you how many conversations I have about how it seems that people seem to be more sick these days more often. It's not our imagination. I can remember as a child, being able to eat raw cookie dough. I'm 33 years old and if you attempt to eat raw cookie dough today you risk becoming deathly sick.

The over use of antibiotics must stop, and most certainly it should not be in our food. I have various symptoms of Yeast Syndrome and I am distraught over how difficult it is to find meats and dairy products free of antibiotics and BVGH additives. I don't know where you stand on this issue or whether or not you are working to rid our society of this devastating situation we have allowed to develop. All I can do is write to you and hope and pray that you do believe this to be a very real problem and that you are working to free us of the sickness many of us face. We are at the mercy of the Government and the Food Industry. Our health and welfare are in your hands, please do the right thing.

Sincerely yours,

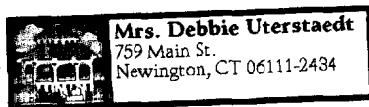

Debbie Uterstaedt
